*Most Common Referral Diagnoses

Goal

A Family with capacity to manage their child's complex regimens of care

Objective

Measurable improvement in child health & reductions in secondary complications

Outcome

Reductions in high cost medical procedures, hospital readmissions, & out of home placement

Average Per Child Per Month Medicaid Cost

Before Childkind's Services: \$4,900 After Childkind's Services: \$2,510

237 children with medical complexity and their families were referred for services in 2013. 126 were provided services. The 56 children whose families completed early intervention services in 2013 were included in the DCH study.
